

- Having 5+ years of hands-on experience in designing, implementing, and executing comprehensive test strategies for complex software applications.
- Designed and automated test scripts using Selenium, Appium, Python, and Java, achieving significant
- efficiency gains.
- Proven ability to identify and report critical bugs, ensuring timely resolution and adherence to QA standards.
- Strong experience in collaborating with developers to fix bugs and improve software quality.
- Excellent communication skills to convey test results and insights clearly to stakeholders, fostering transparency and trust.
- Mentored and coached junior QA engineers, promoting knowledge sharing and team development.
- Adept at staying up-to-date with the latest trends and technologies in automation testing and best practices.
- Experienced in functional testing, reviewing, and analyzing business requirements, and writing detailed Test Plans and test Cases.
- Proven expertise in logging, tracking, and managing defects through their lifecycle.
- Effective communication of defect findings to development teams with detailed reports.
- Conducting thorough regression testing to ensure new code changes do not adversely affect existing functionality.
- Developing reusable regression test suites for efficient testing cycles.
- Possess a good understanding of various testing methodologies, including black box testing, white box testing, integration testing, and User Acceptance Testing (UAT).
- Good experience in OOPs using Core Java and extensively used classes, objects, inheritance,
- polymorphism, exception handling, packages, collection, and many more.
- Good understanding and hands-on experience with web technologies like HTML, XPath, and XML.

- Strong in writing SQL queries to perform backend data validations
- Experience in all phases of Software Testing Life Cycle STLC, Software Development Life Cycle (SDLC), Bug life Cycle, and Methods like Waterfall, V-Model, and Agile.
- Experience in executing test scripts with tools and technologies such as Java, Selenium WebDriver,
- Facilitating UAT sessions with end-users to validate that the software meets their requirements.
- Coordinating feedback and implementing necessary changes based on UAT results.
- Experience in using testing tools JUnit for application integration testing and unit testing.
- Experience in writing CSS Selectors, and Xpath Expressions to identify Web Elements.
- Experience in Behaviour Driven Development (BDD) using Cucumber, which integrated feature files, Step Definition, and Runner classes in Gherkins language.
- Meticulous documentation of testing processes, results, and any relevant findings.
- Keeping test documentation up-to-date with changes in software requirements.
- Analyzing and interpreting test results to identify trends and areas for improvement
- Proven ability in Working individually or as a part of a team, Problem-solving, Process improvement activities, Analytical skills, Reporting, and Assisting to Manager.
- Strong collaboration with cross-functional teams, including developers, business analysts, and project managers.
- Clear and concise communication of testing progress and issues.
- Proficient in creating comprehensive test plans outlining testing approach, scope, resources, and schedule.
- Ability to prioritize test cases based on criticality and business requirements.
- Proficient in creating and managing test data to simulate real-world scenarios.
- Ensuring data integrity and relevance for accurate testing results.

Experience in designing clear and concise test cases to cover functional and non-functional aspects.

Skillful execution of test cases to identify defects and ensure software meets quality standards.

## SKILLS

- **Programming Languages:** JAVA, Python, C++.
- **Query Languages:** PL/SQL, GraphQL.
- **Databases & Tools:** Oracle 11g, MySQL, PostgreSQL, MongoDB, Bugzilla.

- **Frameworks:** TestNG, Hybrid Testing framework, Selenium, Appium, Keyword Driven testing framework, Behaviour-Driven development framework, Test automation framework, Cucumber, JUnit
- **Operating Systems:** Windows, UNIX, Mac OS.
- **IDEs/Versioning/ Performance/ Tools:** IntelliJ, Eclipse, Net Beans, Git, Maven, Log4j, SOAP UI, Jenkins, Postman.
- **Methodologies:** Waterfall Model, Agile (Scrum, Kanban)
- **Software testing methods:** Black box testing, white box testing, Functional testing, Integration testing, and User Acceptance Testing (UAT)

## WORK EXPERIENCE

April 2024 - Present

Test Automation Engineer | HeartCentrix Solutions | DFW, TX

**Client Name:** American Airlines

### Responsibilities:

- Developed and maintained automated test scripts using BDD frameworks, including Cucumber, to streamline testing processes.
- Performed comprehensive UI testing using TestNG and Selenium WebDriver to validate functionality and performance of web applications.
- Conducted database testing with SQL and MongoDB to ensure data accuracy and integrity.
- Debugged and fixed Java code failures in automated test scripts to improve test reliability and execution.
- Migrating manual tests to automated cucumber scenarios.
- Designing and implementing efficient POM structures for UI automation with Cucumber.
- Design and develop automated test scripts using programming languages and frameworks like Python, Java, and Selenium.
- Migrating manual tests to automated cucumber scenarios.
- Automating mobile app testing using Cucumber with tools like Appium.
- Execute automated tests on various platforms and browsers to identify bugs and regressions.
- Monitored Kafka messaging systems and executed automated tests based on message availability, ensuring seamless integration.
- Utilized Selenium and Cucumber to automate test scenarios, enhancing overall test coverage and efficiency.
- Collaborated closely with cross-functional teams, including developers, product managers, and QA analysts, to define testing requirements and ensure comprehensive test coverage.
- Writing step definitions for service and integration tests using Cucumber and frameworks like Cucumber-JVM or Serenity-BDD.

- Experience with CI/CD pipelines to streamline and automate testing workflows.
- Knowledge of other automation testing tools and frameworks to extend testing capabilities.
- Familiarity with Docker containers and Kubernetes orchestration for scalable testing environments.
- Actively participated in agile development processes such as sprint planning, grooming sessions, and retrospectives to support project goals.
- Documented test cases, results, and defects to facilitate clear communication and quick issue resolution.

August 2023 - April 2024

Senior QA Engineer | Tetra Computing | Overland Park, KS

**Client Name:** Mercedes-Benz

**Project Description:** As a senior QA Engineer, I have been Developing and implementing comprehensive test plans and strategies, Designing and executing effective test cases, covering functional, non-functional, and edge cases. And as a Manual Testing Specialist with a proven track record of ensuring code quality and software reliability. Proficient in conducting meticulous code reviews, collaborating with development teams, and executing comprehensive unit tests. Adept at identifying and reporting defects, tracking their resolution, and preventing regression issues through thorough testing. Skilled in manual security testing practices, communication with stakeholders, and the design and development of automated test scripts using Python, Java, and Selenium. Strong leadership and mentoring capabilities, contributing to continuous QA process improvement and staying abreast of industry best practices.

**Responsibilities:**

- Ability to write clear and concise cucumber feature files using Gherkin syntax.
- Expert knowledge of Cucumber frameworks like JUnit, TestNG.
- Ability to automate web UI testing using Selenium WebDriver in conjunction with Cucumber.
- Collaborating closely with developers to ensure thorough unit testing coverage.
- Integrating Cucumber tests into CI/CD pipelines using Jenkins.
- Ensuring that all possible code paths are tested for correctness and completeness.
- Creating scenarios, data tables, examples, and hooks to create robust and maintainable feature files.
- Document and report defects clearly and concisely, including screenshots, logs, and steps to reproduce.
- Track and manage defects through a bug-tracking system, ensuring timely resolution and closure.
- Perform regression testing to ensure that bug fixes haven't introduced new issues.
- Actively incorporating manual security testing practices to identify and address security vulnerabilities.
- Writing step definitions for unit tests using Javascript frameworks like Jest or Mocha.

- Writing step definitions for service and integration tests using Cucumber and frameworks like Cucumber-JVM or Serenity-BDD.
- Facilitate and participate in code reviews and design discussions to identify potential quality issues early in the development cycle.
- Implemented Selenium Grid to enable parallel execution of test cases, significantly reducing test execution time and enhancing overall testing efficiency.
- Configured Selenium Grid to distribute test cases across multiple nodes and browsers concurrently.
- Interacting with APIs and external services through HTTP clients like Rest Assured.
- Design and develop automated test scripts using scripting languages and frameworks like Python, Java, and Selenium.
- Generating clear and concise reports from Cucumber tests, highlighting successes and failures for efficient team communication.
- Participating in performance testing efforts by manually optimizing code for improved performance.
- Experience with CI/CD pipelines to streamline and automate testing workflows.
- Knowledge of other automation testing tools and frameworks to extend testing capabilities.
- Familiarity with Docker containers and Kubernetes orchestration for scalable testing environments.
- Implemented data-driven testing approaches using Postman and ReadyAPI, allowing for the testing of APIs with various input parameters.
- Focusing on the software's external behavior and user interactions.
- Stay up to date with the latest trends and advancements in automation testing tools and technologies.
- Conducted performance analysis and optimizations within the Selenium Grid setup to address bottlenecks and ensure efficient parallel test execution.
- Monitored Kafka messaging systems and executed automated tests based on message availability
- Conducted periodic reviews and updates to performance test scripts to align with changes in application architecture and feature enhancements.
- Automated the performance testing process to ensure the timely and accurate assessment of new features introduced in every software release.
- Collaborated closely with development and release management teams to identify key performance metrics and establish benchmarks for speed, reliability, and resiliency.
- Verifies that integrated components work seamlessly together to meet overall system requirements.

- Implemented automated tests for RESTful web services, focusing on the seamless display of data in the application.
- Developed robust end-to-end test automation scripts using Cypress for web applications.
- Designed and maintained a scalable and modular Cypress testing framework for efficient test script creation and maintenance.

**Environment:** IntelliJ IDE, Selenium WebDriver, Cucumber through BDD approach, Maven and Perfecto, Using IntelliJ, Java, Selenium WebDriver Java language bindings, and TestNG jars, Excel, Microsoft Word, Browsers, Cypress.

August 2020 - July 2022

Senior QA Associate | Cognizant | Hyderabad, India

**Client Name:** Bayer

**Project:** Bayer Web-Site Factory.

**Project Description:** As a meticulous Manual Testing Specialist, I have extensive experience conducting detailed code reviews and collaborating seamlessly with development teams to

ensure the delivery of high-quality code. My expertise extends to the design and execution of comprehensive unit tests, working closely with developers to achieve thorough coverage. Using manual testing techniques, I explore diverse code execution paths, ensuring correctness and completeness. Proficient in both manual and automated test case execution, I document defects with clear and concise details. I excel in defect tracking and management through bug-tracking systems, ensuring timely resolution and conducting effective regression testing. Additionally, I actively incorporate manual security testing practices, collaborating with security experts to address vulnerabilities. Communicating test results and insights to stakeholders clearly and concisely. Contributing to continuous improvement of the automation framework by evaluating new tools and techniques.

### **Responsibilities :**

- Design and develop automated test scripts using programming languages and frameworks like Python, Java, and Selenium.
- Migrating manual tests to automated cucumber scenarios.
- Designing and implementing efficient POM structures for UI automation with Cucumber.
- Automating mobile app testing using Cucumber with tools like Appium.
- Execute automated tests on various platforms and browsers to identify bugs and regressions.

- Writing Gherkin scenarios together, ensuring everyone shared a clear understanding of requirements and acceptance criteria.
  - Mapping user stories to features and scenarios, visually aligning expectations, and prioritizing development efforts.
  - Enabling developers to run feature files as executable tests, providing immediate feedback on code, and preventing downstream defects.
  - Writing step definitions for UI tests using frameworks like Selenium WebDriver and Cucumber.
  - Implementing a robust POM structure to achieve reusability and maintainability of your UI steps.
  - Working on Page Object Model (POM) design pattern to create reusable and maintainable UI tests.
  - Writing custom JavaScript code within your step definitions to extend WebDriver capabilities for specific UI interactions.
  - Performing E2E Regression testing and finding the bugs.
  - Conducted thorough analysis of REST APIs to understand their functionalities, data structures, and error response mechanisms.
  - Collaborated with development teams to gain insights into the API design, ensuring comprehensive test coverage.
- 
- Conducted cross-browser testing using Cypress to ensure consistent functionality and user experience across different browsers.
  - Played a key role in designing, implementing, and maintaining regression and sanity test suites to ensure the stability and reliability of the software product.
  - Executed automated performance tests in each release cycle to measure and analyze the application's response times, throughput, and resource utilization.
  - Worked collaboratively with cross-functional teams to establish and refine performance testing environments that accurately represent production scenarios.
  - Developed custom Groovy scripts within ReadyAPI to extend testing functionality, handle dynamic data, and execute complex test scenarios.
  - Collaborate with developers to fix bugs identified through automated testing.
  - Communicate test results and insights effectively to stakeholders, including project managers, product owners, and other QA engineers.
  - Conducted extensive cross-browser testing by leveraging Selenium Grid to execute test suites on different browsers such as Chrome, Firefox, and Safari.
  - Identifies potential logical errors or inconsistencies by exploring various code paths.
  - Contribute to the continuous improvement of the automation testing process by evaluating new tools and techniques.
  - Utilized Page Object Model (POM) or other design patterns to enhance code reusability and maintainability.

- Executed test cases manually and through automation, documenting defects with clear and concise details.
- Ensured consistent functionality and user experience across various browsers through parallel test execution.
- Actively incorporated manual security testing practices, collaborating with security experts to address vulnerabilities.

**Environment:** Cucumber through BDD approach, Maven, and Perfecto, Using IntelliJ, Java, Selenium WebDriver Java language bindings, and TestNG jars, Cypress, Excel, Microsoft Word, Browsers.

December 2018 - August 2020

QA Associate | Cognizant | Kochi, India

**Client Name:** Bayer

**Project:** Bayer Sales Force Dot Com (SFDC)

**Project Description:** Strategically identifying test cases ripe for automation, prioritizing those that are repetitive, high-impact, or time-consuming. Developing robust automated test scripts using Python or Java, leveraging Selenium, Appium, or Cypress frameworks for efficiency. Designing reusable components for scalability. Seamlessly integrating automated tests into CI/CD pipelines to trigger execution upon code changes, fostering rapid feedback and deployment. Executing automated tests across diverse platforms and browsers to uncover bugs and regressions, ensuring

comprehensive coverage. Meticulously monitoring test results and logs to pinpoint issues, diagnose root causes, and propose effective remedies. Keeping test scripts aligned with evolving software functionalities, ensuring their accuracy and effectiveness throughout the development lifecycle.

### **Responsibilities :**

- Identify test cases suitable for automation, Analysing requirements, specifications, and manual test cases to pinpoint repetitive, high-impact, or time-consuming scenarios for automation.
- Designing the test cases based on an in-depth understanding of the code structure and logic.
- Develop automated test scripts: Building tests using scripting languages like Python or Java, and frameworks like Selenium, Appium, or Cypress. Designing reusable components and libraries for efficiency.
- Responsible for understanding the internal workings of the software application, including its source code and architecture.
- Generating clear and concise reports from Cucumber tests, highlighting successes and failures for efficient team communication.

- Developing Cucumber framework from scratch and performing end to end testing.
  - Working with different log file formats generated by Cucumber tests (e.g., JSON, HTML, plain text).
  - Implementing different Cucumber reporting plugins like HTML Cucumber Reports, Allure Report, or ReportNG.
  - Execute automated tests: Running tests on various platforms and browsers to find bugs and regressions.
  - Worked proactively to identify and address potential issues in the early stages of the development cycle, contributing to the overall improvement of product quality.
  - Utilized ReadyAPI for SOAP and REST API testing, harnessing its capabilities for functional and performance testing.
  - Leveraged Cucumber BDD and data-driven testing techniques to create comprehensive sanity and regression scenarios, covering diverse edge cases and data combinations.
  - Utilized Selenium WebDriver and Page Object Model to design modular and reusable test scripts, facilitating efficient maintenance and scalability for both sanity and regression testing.
  - Designed, developed, and maintained automated test scripts using Cucumber Framework to validate the functionality of RESTful web services.
  - Created and executed test scenarios to verify proper data retrieval and display in the application UI based on REST API responses.
  - Leveraged Postman for designing, executing, and automating API tests, ensuring the reliability and accuracy of web services.
- 
- Created and maintained collections, organized environments, and utilized Postman features for efficient API testing workflows.
  - Work with developers: Collaborating to resolve bugs identified through automated testing, providing clear reports and guidance.
  - Developed comprehensive automated test suites for RESTful APIs using Postman and ReadyAPI with Groovy scripting.
  - Participated in sprint planning, providing estimates for testing efforts related to RESTful web services.
  - Focuses on testing different execution paths within the code to ensure comprehensive coverage.
  - Established and maintained configurations for different browser versions and platforms within the Selenium Grid setup.
  - Extended testing capabilities by incorporating Cypress for API testing, ensuring end-to-end coverage of web applications.
  - Executes tests at the code level to ensure that individual components and functions operate correctly.

- Integrated Cypress tests into CI/CD pipelines (e.g., Jenkins, GitLab CI) for automated test execution on code commits and deployments.

#### Technical Skills and Knowledge:

- Proficiency in scripting languages: Python, Java, etc.
- Expertise in automation frameworks: Selenium, Appium, Cypress, etc.
- Understanding of CI/CD tools and methodologies: Jenkins, GitLab CI, etc.
- Knowledge of API testing tools and frameworks: Postman, Rest Assured, etc.

**Environment:** Python, Java, Selenium, Appium, Cypress, Jenkins, GitLab CI, Postman, Rest Assured, etc.

September 2017 - December 2018

Internship | Policy Bazaar | Noida, India

**Client Name:** Policy Bazaar

#### **Project Description:**

Executing test cases according to test plans and verifying software functionality against requirements.

Bug Identification and Reporting: Thoroughly document discovered issues with screenshots, steps to reproduce, and expected behaviours.

Bug Tracking: Utilize bug tracking systems like Jira to effectively track, update, and ensure timely resolution of reported issues.

Test Planning: Contribute to test plan development by collaborating with senior QA personnel and gaining a deeper understanding of project requirements.

Test Data Preparation: Set up data environments and scenarios essential for comprehensive testing. Tool Familiarization: Gain proficiency in testing frameworks, bug-tracking systems, and other relevant tools used within the organization.

Developer Collaboration: Work closely with developers to enhance understanding of the software, report bugs effectively, and contribute to issue resolution.

Communication: Keep project managers, product owners, and other QA team members informed about testing progress and results.

Team Participation: Actively participate in team meetings, discussions, etc

#### **Responsibilities :**

- Executing test cases: Following test plans and manually testing software features, verifying functionality against requirements.
- Identifying and reporting bugs: Documenting any discovered issues with screenshots, steps to reproduce, and expected behaviors.
- Tracking and updating bugs: Using bug tracking systems like Jira to stay organized and ensure timely resolution.

- Contributing to test plan development: Working with senior QA personnel to understand project requirements and contribute to creating test plans and cases.
  - Contributed to the development of a robust automated regression suite for RESTful APIs to ensure continuous integration and delivery.
  - Preparing test data: Setting up data environments and scenarios necessary for thorough testing.
  - Worked closely with the development team to understand changes in APIs and updated automated tests accordingly.
  - Collaborated with system architects and engineers to simulate realistic user scenarios, ensuring performance testing scenarios mirror real-world usage.
  - Actively participated in release planning meetings to provide estimates and insights into the performance testing efforts required for each release.
  - Collaborated with the Quality Assurance and DevOps teams to implement performance testing best practices and integrate performance testing into the overall testing strategy.
  - Learning and utilizing testing tools: Familiarize myself with testing frameworks, bug-tracking systems, and other relevant tools used in the organization.
  - Collaborating with developers: Working closely with developers to understand the software, report bugs effectively, and contribute to resolving issues.
  - Communicating findings to stakeholders: Keeping project managers, product owners, and other QA team members informed about testing progress and results.
  - Participating in team meetings: Attending discussions and contributing your insights to improve the testing process.
  - Actively learning: Continuously expanding your knowledge by attending training sessions, reading documentation, and taking online courses to stay updated on industry trends and QA best practices.
- 
- Seeking feedback and mentorship: Asking questions, seeking guidance from senior QA personnel, and actively participating in team learning initiatives.
  - Exploring automation: Depending on your role and interests, you might gain a basic understanding of automation frameworks and tools for future growth.
  - Additional Responsibilities:
    - Assisting with regression testing and ad-hoc testing.
    - Writing basic test scripts (potential depending on specific role).
    - Documenting testing procedures and results.
    - Maintaining test environments and data.

**Environment:** Python, Java, Selenium, Appium, Cypress, Jenkins, GitLab CI, Postman, Rest Assured, Maven, and Perfecto, Using IntelliJ, Java, Selenium WebDriver Java language bindings, and TestNG jars, Cypress, CI/CD tools, etc.

## EDUCATION

- Master of Science (M.S) in Computer Science, University of Central Missouri - Lee's Summit, Missouri, USA.
- Bachelor of Technology in Electronic and Communication Engineering, Gitam University, Visakhapatnam, India.
